## CereScan Deploys Circadence WARP WAN Optimization Solutions

Circadence Corporation, the global leader in the development of innovative enterprise performance technologies, announced today that CereScan, a Denver-based brain imaging company focused on brain disorders and traumatic injuries, selected Circadence's WARP WAN Optimization to deliver ultra-secure, high speed transfers of its high definition functional brain images between its imaging centers, reading physicians and the company's data center in Denver.

Circadence's WARP WAN Optimization platform provides significant data acceleration benefits over the wide area network and can increase the speed of CereScan's high definition data transfers from 100 to 1000 percent on any network, mobile, or remote location connection. WARP WAN Optimization is military-grade secure and fully HIPAA compliant.

CereScan's images are used for clinical and research applications related to brain-based disorders, such as traumatic brain injury, post traumatic stress disorder, Alzheimer's disease, anxiety and depression.
